8:30 a.m. - Registration - 9:00 a.m. - 4:00 p.m. - Presentation

Cost: **\$100.00** per person - Lunch on your own

PRESENTATION DESCRIPTION

Are you tired and overworked trying to teach basic science concepts to students? Are your students having trouble understanding science processes? Join us for an invigorating and motivational workshop packed with vocabulary strategies, hands-on lab activities, powerful manipulatives, models and experiments that can be taken directly back to the classroom.

Using the 5E Instructional Model, participants will be guided through several vertically aligned lab activities that are directly correlated to the secondary Science TEKS.

Participants will leave with several useful teaching models that can be used with ELL as well as G/T students. Powerful vocabulary strategies are woven throughout the workshop creating opportunities for teachers to learn best practices.

Participants attending will leave with a solid understanding of secondary TAKS Science Objectives as well as content knowledge that is sure to motivate even the most reluctant learner. Together, we are raising the bar to clear the hurdles to achieve excellence in secondary science!
